

AttackIQ Security Validation Service

The AttackIQ Security Validation Service (SVS) provides customers with a managed engagement model that enables them to accelerate the substantial benefits of a continuous security validation program – even with limited security team resources.

Designed to work closely with the customer's executive management and security teams, the AttackIQ SVS offering focuses on helping organizations achieve situational awareness and visibility into both the effectiveness and efficiency of their security programs, as well as overall resilience.

Benefits of the AttackIQ SVS offering include:

- **Rapid time to value.**
Our best practices and security expertise help ensure rapid implementation of the AttackIQ Security Optimization Platform to measure the effectiveness and efficiency of security control, personnel, and process performance.
- **Optimized security.**
AttackIQ SVS is designed to help customers secure their operations, reduce risk, and further reduce the attack surface against potential adversaries. This value is delivered on a continuous basis at a weekly cadence versus the alternative ad hoc testing approaches. This facilitates executive-level reports that provide measurement and visibility into progress and align the context of key controls to the core business.
- **More effective and efficient security investments.**
AttackIQ SVS leverages MITRE ATT&CK tactics and techniques to measure the effectiveness of customers' security controls and provide insight to the efficiency of their security investments. By understanding which investments are working and which are not, customers can save money through rationalizing and consolidating controls.
- **Unburdened resources.**
For customers who need to be unburdened of the deployment of new security capabilities or who may not have the internal resources necessary to operate and benefit from a continuous security validation program, the AttackIQ team operates the Security Optimization Platform as a managed service. The offering integrates into an existing security program, allowing customers to reduce operational costs, measure effectiveness, and act on detailed operational reporting and remediation recommendations.
- **Understand and minimize risk.**
AttackIQ's enhanced reporting capability, combined with our practitioner-led customer success organization assists customers with prioritizing and recommending potential remediation recommendations. This objective reporting on the effectiveness and efficacy of security controls provides situational awareness and visibility into customers' cyberhygiene, as well as the overall resilience of their security programs.

About AttackIQ

AttackIQ, the leading independent vendor of breach and attack simulation solutions, built the industry's first Security Optimization Platform for continuous security control validation and improving security program effectiveness and efficiency. AttackIQ is trusted by leading organizations worldwide to plan security improvements and verify that cyberdefenses work as expected, aligned with the MITRE ATT&CK framework. The Company is committed to giving back to the cybersecurity community through its free [AttackIQ Academy](#), open Preactive Security Exchange, and partnership with the [MITRE Center of Threat Informed Defense](#).
